SUMMARY

Computer Engineering student (Honors in AIML) with a strong foundation in SQL, relational & NoSQL database design, and backend systems for data collection and processing. Experienced in building RESTful APIs, working with high-volume, unstructured datasets, and applying feature extraction and data pipelines to real-world problems. Solid grounding in DBMS, Operating Systems, and Computer Networks, including core distributed-systems concepts (consistency, availability, fault tolerance).

EDUCATION

K. J. Somaiya Institute of Technology

B.Tech in Computer Engineering (Honors – AIML)

– CGPA: 9.07/10 (through Semester VI)

– Relevant Coursework: DSA, Operating Systems, Computer Networks, DBMS, Machine Learning

Mumbai

2023 – 2027

EXPERIENCE

Claidroid Technologies – Machine Learning Intern

Remote

Link

Dec 2024 – Jul 2025

- Built and optimized CNN models in Python/TensorFlow, achieving 85% accuracy on CIFAR-100 via systematic data preprocessing, augmentation, and hyperparameter tuning.
- Benchmarked multiple model configurations through iterative evaluation, identifying architectures that consistently improved validation accuracy over the baseline.

Central Railway – Technical Intern

On-Site

Link

Jul 2024 – Aug 2024

- Gained hands-on exposure to Mumbai's EMU railway operations, maintenance workflows, hardware infrastructure, and safety protocols, developing an understanding of large-scale engineering systems and industrial operations.

PROJECTS

Skill-Verse

- Engineered a scalable web-based learning platform with role-based authentication, course management, and gamified learning features.
- Designed RESTful APIs, integrated MySQL for efficient data storage, and deployed secure backend services using Node.js and Express.js.

Link

SSTC

- Built a full-stack student collaboration platform enabling academic networking, communication, and structured resource sharing.
- Architected scalable backend APIs, optimized MongoDB database interactions, and enforced secure user authentication using the MERN stack.

Link

ReFace

- Created a forensic facial reconstruction desktop application using Electron, Three.js, Python (Flask), and Blender to transform traditional 2D composite sketching into an interactive 3D reconstruction system.
- Delivered 30+ facial morphing controls, case management with custom .rpf files, Blender-based mesh processing, multi-format model export (OBJ/FBX/GLB), and complete undo/redo state management.

Link

CAD-C

- Constructed a CNN-based lung cancer detection system using CT scan datasets with Python and TensorFlow.
- Performed data preprocessing, feature extraction, model evaluation, and hyperparameter tuning to improve diagnostic prediction accuracy.

Link

TECHNICAL SKILLS

Languages: C, C++, JavaScript, Python

Databases: SQL, MySQL, MongoDB, PostgreSQL

Data & Backend: REST APIs, Node.js, Express.js

Core Concepts: DBMS, DSA, OOP, Operating Systems, Computer Networks

Tools: Git, GitHub, VS Code, AWS Cloud

ACHIEVEMENTS

Tantragyan 2026 – National Level Project Competition | 3rd Prize

- Secured 3rd place at Tantragyan 2026, a national-level project competition, for demonstrating outstanding creativity, problem-solving skills, and technical innovation.

Link

TECHSPARK – CSI-IT, FCRIT | 2nd Prize

- Secured 2nd prize in TECHSPARK, a competitive technical event organized by CSI-IT, Fr. C. Rodrigues Institute of Technology, demonstrating strong technical and teamwork skills.

Link

CERTIFICATIONS

AWS Academy Graduate – Cloud Foundations | Training Badge

GenW.AI Explorer (Level 1) – Deloitte, Hacksplasion 2026 | Certification
